La velocidad es un índice que se obtiene dividiendo el valor total de los cheques entre el valor total de los depósitos, dentro del mismo período. Los índices anuales se obtienen promediando los índices mensuales.

Las cifras correspondientes a cheques pagados por cuenta del gobierno y entidades públicas comprenden también el valor de cheques girados por los Bancos privados.

a) Los datos se toman de los Balances de los Bancos. Los totales son ligeramente superiores a los que se encuentran en otras series de préstamos y descuentos iniciados en septiembre de 1949, ello se debe a la inclusión dentro de esta serie, de los créditos registrados en los Departamentos no bancarios del Crédito Hipotecario Nacional, excluyendo las reservas de préstamos y descuentos de los Bancos.
